

Cardboard Shredders

Do you want to make eco-friendly packaging material from your cardboard waste? A Cardboard Shredder is a sustainable solution to repurpose and recycle corrugated cardboard waste into void-fill material. These machines pay for themselves by helping reduce the cost of packaging material, and waste disposal.

Introducing our range of Cardboard Shredders - we supply Cushion Pack ® Shredders which are made in Germany. We also supply Hyper ® Shredders, manufactured in Italy.

Cardboard Shredders have a number of advantages:

- They reduce the amount of waste you have to store onsite.
- They save money on your waste charges – you can get rid of your cardboard recycling bins.
- They provide you with a valuable source of packaging material, which, in terms of protection, would be superior to bubble wrap.
- They reduce the amount you have to spend on bubble wrap, which in light of the recent worldwide increases on the price of plastics, is a significant saving.
- As a very environmentally friendly option, you are actively reducing your Carbon Footprint – the Carbon Miles of waste cardboard is significant, as it is usually exported to be recycled.
- You can not only replace your plastic packaging requirements, but replace them with an environmentally friendly option, especially in view of the current trends requiring plastic waste legislation coming down the road.
- Customers are becoming more environmentally conscious and by using a Cardboard Shredder to create your void-fill packaging, you can show them your commitment to being environmentally friendly.
- These machines are extremely easy to use.
- When you consider what you spend on recycling bins and bubble wrap or packing peanuts, these machines will quickly pay for themselves – these machines can be leased so the cost per week can be less than you are currently paying for your bins and plastic packaging.

We have a range of machines suitable for small users up to large volume Shredders to suit every need.

We offer leasing of these machines starting from as little as €22 per week – and once the lease is paid off, the machine is yours to keep!
